### Statement

Your cousin found a USB drive in the library this morning. He's not very good with computers, so he's hoping you can find the owner of this stick!

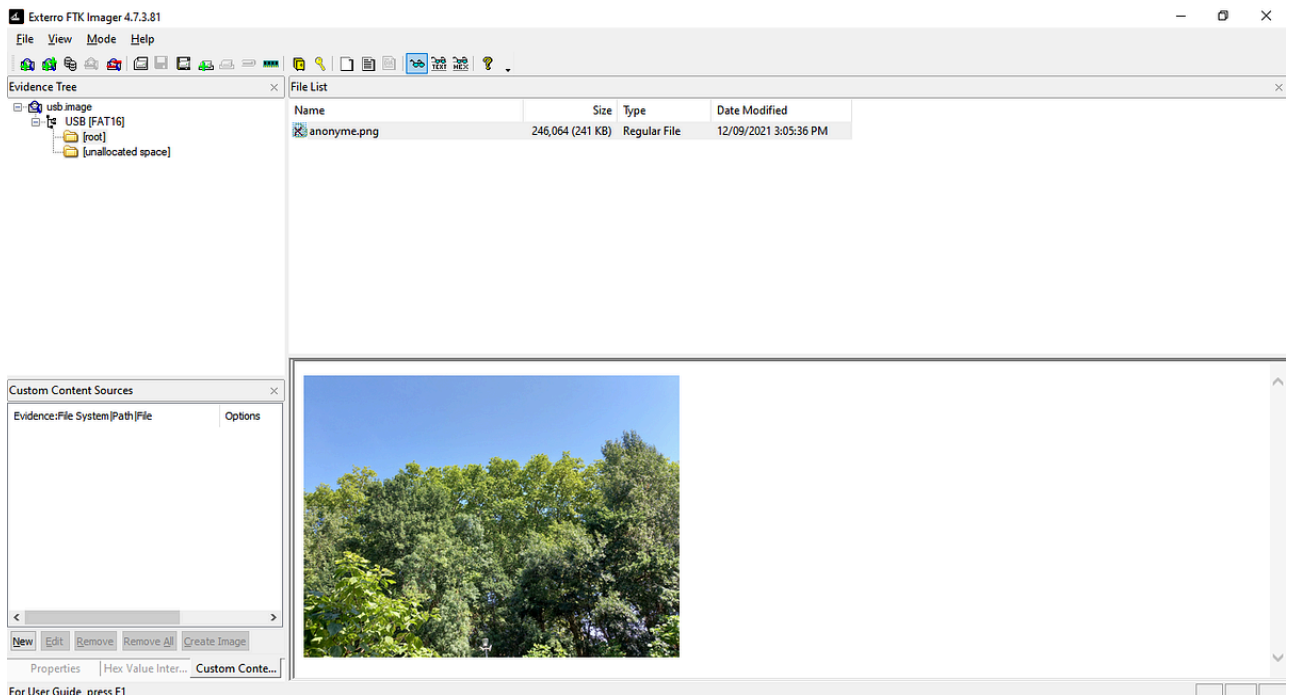

The flag is the owner's identity in the form `firstname_lastname`

sha256sum: cd9f4ada5e2a97ec6def6555476524712760e3d8ee99c26ec2f11682a1194778

Download the challenge

## How I found the flag

The evidence was a .image file, so I opened it using **FTK Imager**.

**Add Evidence Item** → choose *Image File* → load usb.image.

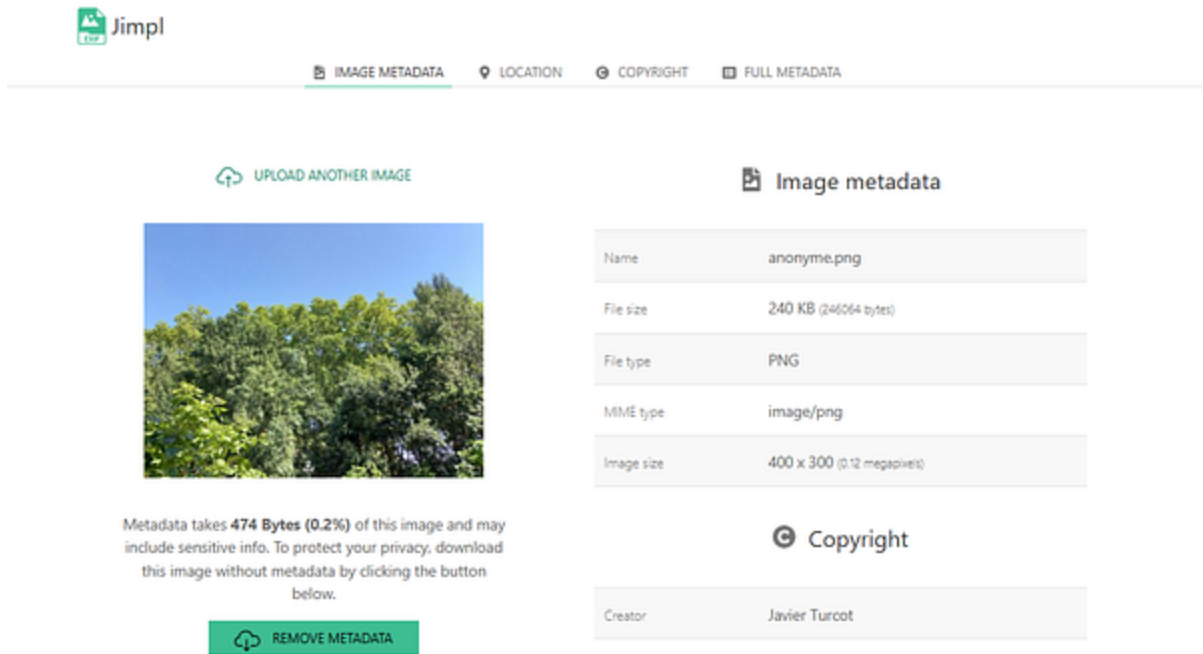

FTK displayed the available partitions and file systems, including unallocated space.

Inside the root directory, there was only one file: **anonyme.png**, an image of a tree.

Since it was the only file, I figured the metadata might be the key.

ColorType	RGB
Compression	Deflate/Inflate
Creator	Javier Turcot
FileAccessDate	2025-11-14 03:45:50 +0100
FileinodeChangeDate	2025-11-14 03:45:50 +0100
FileModifyDate	2025-11-14 03:45:50 +0100
FilePermissions	prw-----
FileSize	0 bytes
FileType	PNG

The screenshot shows the Jimpl website interface. At the top, there's a navigation bar with tabs: IMAGE METADATA (selected), LOCATION, COPYRIGHT, and FULL METADATA. Below the navigation bar, there's a section for uploading an image. A thumbnail of a forest image is displayed. To the right of the thumbnail, the 'Image metadata' section shows the following details:

Name	anonyme.png
File size	240 KB (246064 bytes)
File type	PNG
MIME type	image/png
Image size	400 x 300 (0.12 megapixels)

Below the metadata, there's a 'Copyright' section showing the creator as 'Javier Turcot'. A message below the image states: 'Metadata takes 474 Bytes (0.2%) of this image and may include sensitive info. To protect your privacy, download this image without metadata by clicking the button below.' A green button labeled 'REMOVE METADATA' is visible.

I extracted the PNG and ran **exiftool** on it—and found the creator's name.

Then I tested different flag formats until I found the exact one the challenge required.

- Javier\_Turcot
- Turcot\_Javier
- Turcot Javier
- Javier Turcot
- javier turcot

I verified it using another metadata viewer, which confirmed the same information.

I also used jimpl.com to check the file's metadata.

**Correct flag:** javier\_turcot

It took a few attempts since the challenge was case-sensitive and very specific.
