

Conan's Web Pentesting Approach

written by Alexander Sapo

A structured, personalized web pentesting methodology built to keep testing organized and replace blind guessing with systematic execution. It enforces a clear, repeatable process that keeps workflows on track and ensures no attack vector is missed.

Process

passive recon	explore & capture	1
active recon	fuzz	2
identify attack surface	determine techniques	3
initial vuln test	observe , identify, narrow down	4
run down	exhaustive systematic testing	5
cycle back	return to relevant process	@
